

### **Deliverable 4.3**

In WP 4.4 Plastone Oy has developed a veterinary ear speculum, to be used especially with dogs. The ear channels of animals are normally longer than those of human, thus normal ear speculum does not work properly. There are two alternative materials to be used, both recycled. The disposable product is made of HD-PE and multi-use product is made of PBT. In this work package a mould for the product has been made and the product has been introduced into the market.
